

Research Project (S8)

Course coordinator: To be selected

European credits ECTS: 18

Teaching Language: Spanish, French, Basque or English

Supporting files: English

Description

- The main objective of this course is to carry out a research project under the supervision of a tutor.
 - Initially the student will have to choose the research topic among the offer presented by the different labs in the Chemistry Faculty at the University of the Basque Country, POLYMAT or nearby research centers or companies.
 - Then an initial literature survey will be carried out by the student, guided by the tutor.
 - The experimental work to carry out in the research project will be designed by the student, under the guidance of the tutor.
 - The student will discuss the results obtained in those experiments with the tutor.
 - At the end the student will write a report on the work carried out, including the introduction to the topic, the experimental methods applied, the results obtained and their discussion and the final conclusions drawn from them.
 - The work will be presented and defended in front of a jury.
-
